

Magnetic Liners & Wear Parts

Durex® provides custom low-cost Magnetic Liner Solutions designed for your specific applications.

Durex® offers specialized urethane formulas for high wear and abrasion applications. An attachment system with magnets is available for easy attachment to steel surfaces. A unique magnetic design offers extremely strong magnetic attraction that will hold for both static and vibratory applications. This design allows for the best placement of the magnets in a cost-effective manner.

Magnetic liners create a smooth wear surface where other installation types may leave exposed bolt heads or attachment plugged holes that could accelerate wear due to direction change of material flow.

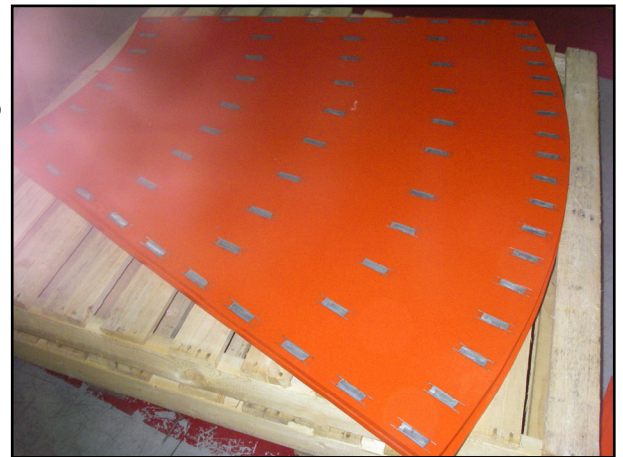

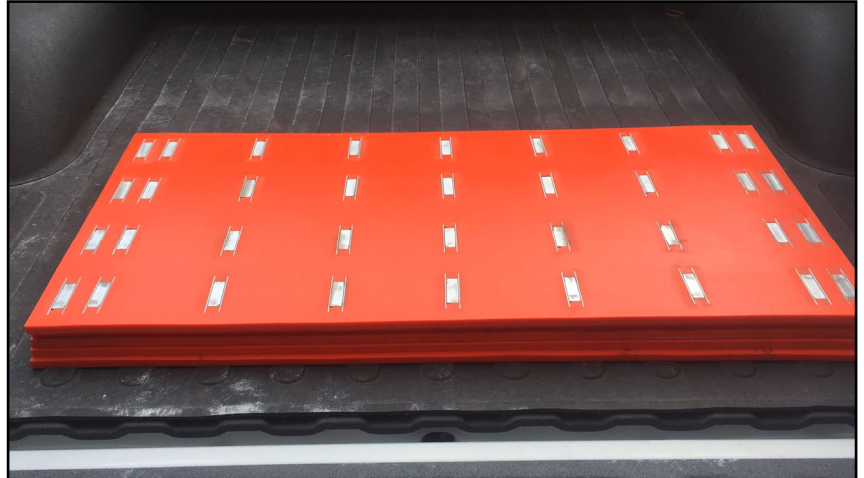

Magnetic liners and parts come in some standard sizes but can be made to many shapes and sizes. These designs are engineered into the product for customized fit and best wearing results. The magnetic liners can handle wet or dry applications, hot summers, and very cold winters.

Recommended lined applications include:

- ◆ Static and Vibratory chute
- ◆ Rotary distributor/ turn heads
- ◆ Sand slurry flumes
- ◆ Crusher Main frames
- ◆ Feed boxes
- ◆ Side wear plates on screen decks
- ◆ Discharge lips
- ◆ Cross supports between bucker bars and stringers
- ◆ Shaft covers
- ◆ Quick patches for worn through high wear areas
- ◆ Inspection doors on machinery

Rubber & Rubber / Ceramic Magnetic Liners can be utilized and tailored for specific needs, such as, shaft covers for vibrating equipment, crusher main frame liners, chute liners, etc.
